

Introducing

VENUS VELOCITY™

Hair Removal

No more endless shaving, tedious plucking, painful waxing, sharp razor nicks, and messy hair removal creams! Venus Velocity™ provides effective, quick, and comfortable hair removal for the face and body using state-of-the-art laser technology.

EFFECTIVE RESULTS

Powerful diode laser technology will reduce your unwanted hair.

FAST TREATMENTS

Venus Velocity™ can remove unwanted hair in less time than traditional treatments, even for large areas of the body. There's no downtime so you can return to your regular routine immediately afterward.

SAFE FOR ALL SKIN TONES

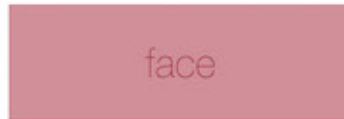

Venus Velocity™ is safe for all skin tones, even tanned skin. The advanced cooling system works on contact to ensure your skin is always protected, so you can enjoy a more comfortable treatment.

What Venus Velocity™ Can Do

FOR YOU

What to **EXPECT**

Venus Velocity™ laser hair removal treatments are quick, and the length of the session will vary depending on the size of the treatment area. In most cases, sessions can be booked during a lunch break, and multiple smaller areas (such as the underarms and bikini line) may be treated during the same session.

Multiple sessions are needed for permanent hair reduction, because hair grows in different stages—it must be in the anagen (growth) stage for laser hair removal to work. Most patients receive 4-6 treatments per area, and the number of sessions will vary for each patient depending on the area being treated. Treatments occur 4-8 weeks apart.

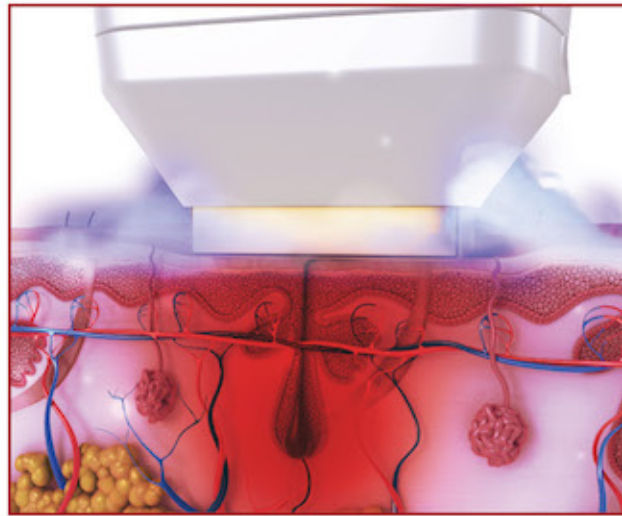

Consult your certified provider to create customized treatment plan that suits your individual treatment needs, based on your skin tone and hair type.

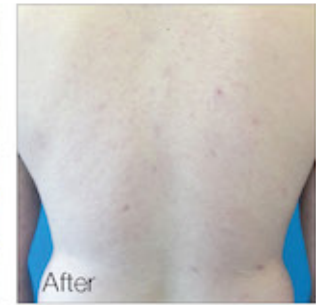

How It **WORKS**

Hair grows in a cycle of three stages: anagen (growth), catagen (transitional), and telogen (resting). Venus Velocity™ uses laser technology to target the hair follicle in the anagen phase, which is when the hair responds best to the treatment. About 30% of hair is in this phase at any given time, which is why you need multiple treatments to see results.

Venus Velocity™ works by delivering energy to the hair follicle, where it's absorbed by the hair pigment. This destroys the follicle so that the hair cannot grow anymore, resulting in permanent hair reduction.
