

Waxing Information Sheet

Pre- treatment

- Retinoic products should be stopped 2 weeks prior to treatment.
- Avoid sun exposure at least 1 week prior to treatment.
- Reschedule your appointment if you have any active infections.
- Accutane must be stopped 12 months prior to waxing.
- Inform your aesthetician if you have had blisters or skin lifting in the past.
- Let the hair grow for a minimum of one week prior to treatment.

Post- treatment

- Redness and mild swelling is normal after your treatment. If you develop blisters or skin drainage call the office right away.
- Sunscreen will be applied before you leave the office.
- Wear sunscreen to treated area throughout the course of your treatment.
- Avoid sun exposure for at least 4 days.
- You may take Tylenol as needed for discomfort or apply ice.
- You must use a hydrating skin care product after your treatment to maximize your results. Your skin care expert can make recommendations for your specific skin type.

What to expect

- Healing may take up to 7 days with mild to moderate flaking and/or peeling of the treated area. Never pick the area, it may lead to infection. Instead you should gently exfoliate with a wash cloth.
- Some people may develop dark or light spots to area treated.
- Do not tweeze hairs in between your appointment since this may lead to asymmetry.
- The clinical result varies from one individual to another.
