

## PRX Derm Perfection Information Sheet

### Pre- treatment

- Retinol products should be stopped one week prior to treatment.
- Avoid any acid cleansers or exfoliating cleansers one week prior to treatment.
- Avoid sun exposure without sunscreen 2 weeks prior to treatment.
- Reschedule your appointment if you have any active infections including cold sores.
- Accutane must be stopped 12 months prior to chemical peels.
- PRX should not be performed on pregnant or lactating women.

### Post- treatment

- Moisturizing Face Cream will be applied before you leave the office.
- Day 1: Apply Moisturizing Face Cream to treated area to help with dryness.
- Day 2: AM- Apply Moisturizing Face Cream to treated area & then SPF.
  - PM- Apply Facial Smoothing Fluid. Wait 30 min and then apply the Moisturizing Face Cream.
- May reapply the Face Cream as needed and return to makeup on Day 2.

### What to expect

- Healing may take up to 7 days with mild to flaking and/or peeling of the treated area. Never pick the area, it may lead to infection. Instead you should gently exfoliate with a wash cloth.
- Some people may develop dark or light spots to area treated.
- Improvement may become noticeable a few days after the first treatment. Some patients do not notice an improvement until after a few treatments have been performed and a small percentage of patients do not respond to the treatment at all.
- Treatments are provided at 7-10 days apart.
- Several treatments will be necessary to achieve optimal results.
- The clinical result, as well as the optimal number of treatments, varies from one individual to another.
